Email: gouxu@scu.edu.cn

在 Linux 32 系统安装 Oracle 10g

- 1. 操作系统
- 1.1 CentOS 5.2 及以上版本
- 1.2 Redhat Advance Sever 4 及以上版本

安装操作系统可以参考相关课件《CentOS5 安装过程.pdf》

- 2. Oracle 10g 安装准备工作
- 2.1 用 root 登录 linux 系统

su -

2.2 step1:检查 host 文件

vi /etc/hosts

[root@speedec ~]# cat /etc/hosts
Do not remove the following line, or various programs
that require network functionality will fail.
127.0.0.1 speedec localhost.localdomain localhost

- 文件中必须包含 a fully qualified name for the server
- 一般格式:

<IP-address><fully-qualified-machine-name><machine-name>

● 建议必须含有 localhost,这对启动 0racle 监听等服务很重要

2.3 step2:设置内核参数

vi /etc/sysctl.conf

kernel.shmall = 2097152 kernel.shmmax = 2147483648 kernel.shmmni = 4096 # semaphores: semmsl, semm

semaphores: semms1, semmns, semopm, semmni

kernel.sem = 250 32000 100 128

fs.file-max = 65536

net.ipv4.ip_local_port_range = 1024 65000

net.core.rmem_default=262144

net.core.rmem max=262144

net.core.wmem_default=262144

net.core.wmem_max=262144

退出 vi, 让设置立即生效

教师: 苟旭

/sbin/sysctl - p

说明:

- shmmax 定义单个进程共享内存段的最大值,它取值范围是[0,4294967295],单位为 byte。
- 建议: kernel. shmmax = 2147483648, SGA 的不要超过这个数字
- 对于 32bit 的 1inux 来说,不管实际的内存有多大, shmmax 的最大值不应该 超过 4294967295。
- 当然这个参数与 linux 内核和版本有关系
- 有兴趣的可以查询相关网络资料

2.4 step3,检查几个文件

系统资源限制配置文件/etc/security/limits.conf 文件中加入:

vi /etc/security/limits.conf

- * soft nproc 2047
- * hard nproc 16384
- * soft nofile 1024
- * hard nofile 65536

要使 limits.conf 文件配置生效,必须要确保 pam_limits.so 文件被加入到启动文件中。即文件中加入下列行,如果里面没有的话

vi /etc/pam. d/login

session required /lib/security/pam_limits.so

2.5 step4:禁用 selinux

vi /etc/selinux/config

SELINUX=disabled

各注:

出于解决安全问题,NSA<u>(National Security Agency 的缩写.它是五角大楼下属的 15 个国防局之一)</u>在 Linux 社区的帮助下开发了一种访问控制体系,在这种访问控制体系的限制下,进程只能访问那些在他的任务中所需要文件。这种体系叫做 Security-Enhanced Linux 或简化为 SELinux。SELinux 提供了比传统的 UNIX 权限更好的访问控制

2.6 Step5:检查必要的 rpm 包

教师: 苟旭

```
rpm -q setarch
```

rpm -q compat-libstdc++

rpm -q make

rpm -q glibc

rpm -q openmotif

rpm -q compat-db

rpm -q libaio

rpm -q gcc

rpm -q compat-gcc-32

rpm -q compat-gcc-32-c++

说明:

- 留意 rpm -q 的查询结果
- 没有目前系统没有安装相关 rpm,就用 rpm ivh ***.rpm 安装
- 相关 rpm 包一般在 linux 安装光碟中都有

2.7 Step6:创建用户和组

用以下命令创建下列 Oracle 运行和安装需要的组和用户

groupadd oinstall groupadd dba groupadd oper useradd -g oinstall -G dba oracle passwd oracle

说明:

● 建议为 Orcle 用户设置一个复杂的密码

2.8 Step7:创建安装 oracle 的目录

创建 oracle 安装目录 mkdir -p /oracle/product/10.2.0/db_1

修改对应目录的权属关系 chown -R oracle.oinstall /oracle

2.9 Step8:为用户打开访问 X 权限

用 root 登录, 执行下列指令:

su-

xhost +

说明:

● xhost + 是使所有用户都能访问 Xserver.

2.10 Step9:修改 Oracle 用户的参数

把下列行加在/home/oracle/. bash_profile 文件末尾,注意把其中ORACLE SID 换成自己的实例名(如 orcl):

vi /home/oracle/.bash_profile

```
# Oracle Settings
TMP = /tmp;
export TMP
TMPDIR=$TMP;
export TMPDIR
ORACLE_BASE=/oracle;
export ORACLE BASE
ORACLE HOME=$ORACLE BASE/product/10.2.0/db 1;
export ORACLE HOME
ORACLE_SID=expbook;
export ORACLE SID
ORACLE TERM=xterm;
export ORACLE TERM
PATH=/usr/sbin:$PATH;
export PATH
PATH=$ORACLE HOME/bin:$PATH;
export PATH
LD LIBRARY PATH=$ORACLE HOME/lib:/lib:/usr/lib;
export LD LIBRARY PATH
CLASSPATH=$ORACLE HOME/JRE:$ORACLE HOME/jlib:$ORACLE HOME/rdbms/jlib;
export CLASSPATH
#LD ASSUME KERNEL=2.4.1;
export LD ASSUME KERNEL
NLS LANG=AMERICAN AMERICA. ZHS16GBK;
export NLS_LANG
if [ $USER = "oracle" ]; then
if [ $SHELL = "/bin/ksh" ]; then
ulimit -p 16384
ulimit -n 65536
else
ulimit -u 16384 -n 65536
fi
fi
```

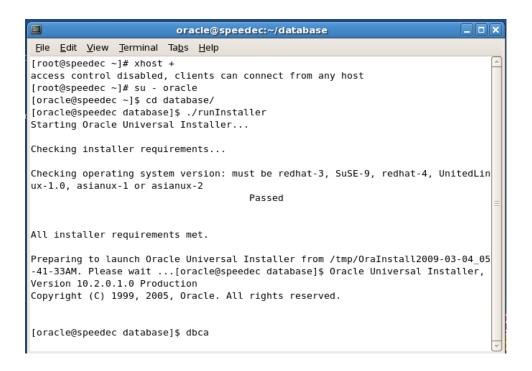

说明:

- 留意文本中红色部分关键信息
- 结合自己的应用设置 SID

2.11 Step10: 启动安装

- 用 oracle 用户登录。
 - su oracle
- 如果用的是 X 模式,要把 DISPLAY 设置: DISPLAY=<machine-name>:0.0; export DISPLAY
- 在 Oracle 安装文件 Disk1 目录下用如下命令开始安装:
- ./runInstaller

3. Oracle 10g 安装过程

3.1 选择高级安装 advanced installation

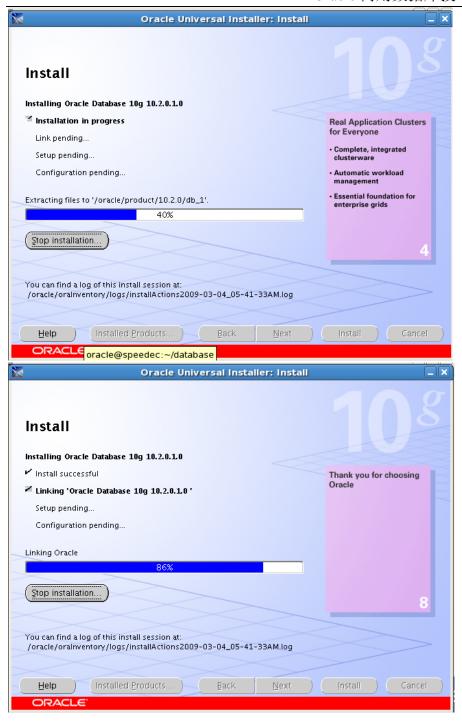

Oracle Database 10g Installation - Installation Method	
Select Installation Method	
® Basic Installation Perform full Oracle Database 10g installation with standard configuration options requiring input. This option uses file system for storage, and a single password for all database ac	
Oracle Home Location: /oracle/product/10.2.0/db_1	Browse
Installation Type: Enterprise Edition (1.3GB)	▼
UNIX DBA Group: oinstall	-
Create Starter Database (additional 720MB)	
Global Database Name: orci	
Database Password: Confirm Password:	
This password is used for the SYS, SYSTEM, SYSMAN, and DBSNMP accou	nts.
C Advanced Installation Allows advanced selections such as different passwords for the SYS, SYSTEM, SYSMAN, and DBSNMP accounts, database character set, product languages, automated backups, custom installation, and alternative storage options such as Automatic Storage Management.	
Help Back Next Install (Cancel

3.2 默认情况可以找到安装路径,选择下一步

😿 Oracle Universal Installer: Specify Inventory directory and credentials 💷 🕨
Specify Inventory directory and credentials
You are starting your first installation on this host. As part of this install, you need to specify a
directory for installer files. This is called the "inventory directory". Within the inventory directory, the installer automatically sets up subdirectories for each product to contain inventory data and will
consume typically 150 Kilobytes per product.
Enter the full path of the inventory directory.
/oracle/oralnventory Browse
You can specify an Operating System group that has write permission to the above inventory directory. You can leave the field blank if you want to perform the above operations as a Superuser.
Specify Operating System group name:
oinstall ▼
Help Installed Products Back Next Install Cancel
ORACLE'

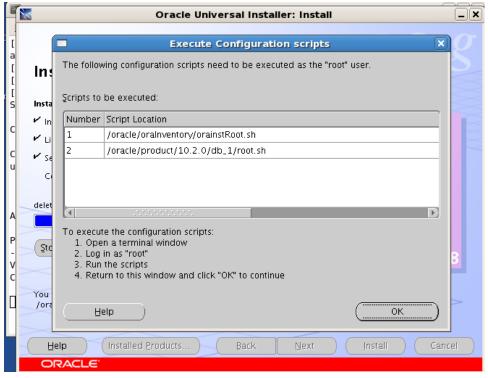

3.3 开始安装数据库软件,这个过程很快

3.4 安装过程需要执行两个 sh 文件, 执行完就继续

● 执行第一个 shell

[root@speedec oraInventory]# ./orainstRoot.sh
Changing permissions of /oracle/oraInventory to 770.
Changing groupname of /oracle/oraInventory to oinstall.
The execution of the script is complete
[root@speedec oraInventory]# ■

● 执行第二个 shell

```
[root@speedec db_1]# ./root.sh
Running Oracle10 root.sh script...

The following environment variables are set as:
    ORACLE_OWNER= oracle
    ORACLE_HOME= /oracle/product/10.2.0/db_1

Enter the full pathname of the local bin directory: [/usr/local/bin]:
    Copying dbhome to /usr/local/bin ...
    Copying oraenv to /usr/local/bin ...
    Copying coraenv to /usr/local/bin ...

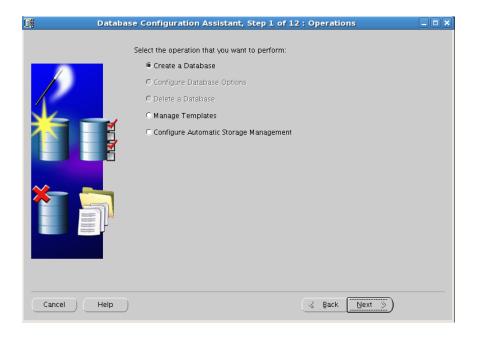

Creating /etc/oratab file...
Entries will be added to the /etc/oratab file as needed by
Database Configuration Assistant when a database is created
Finished running generic part of root.sh script.
Now product-specific root actions will be performed.
```

3.5 然后进入进入 DBCA(数据库配置工具)

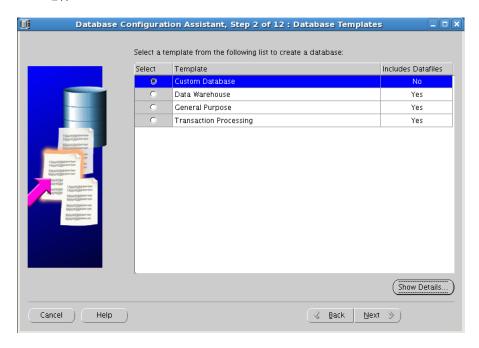

3.6 选择建库安装选项: create database

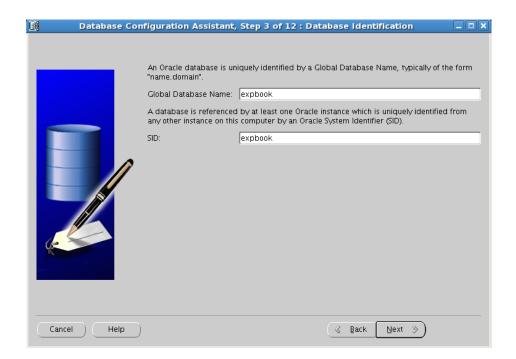

3.7 选择 costom database

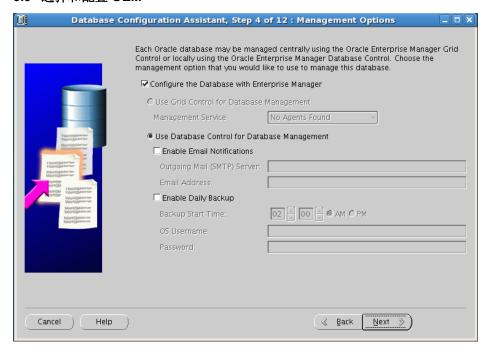

3.8 填写 S_ID 和数据库名

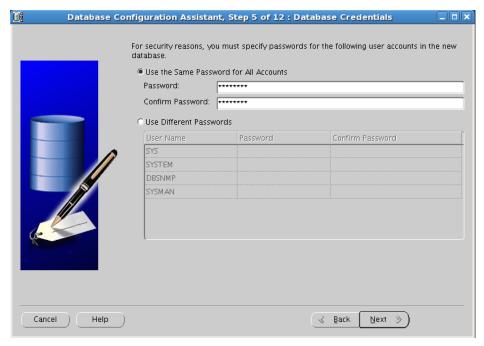

3.9 选择和配置 OEM

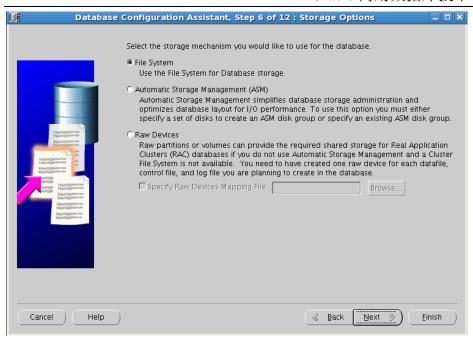

3.10 为了方便所有账户使用相同的密码,请设置后牢记

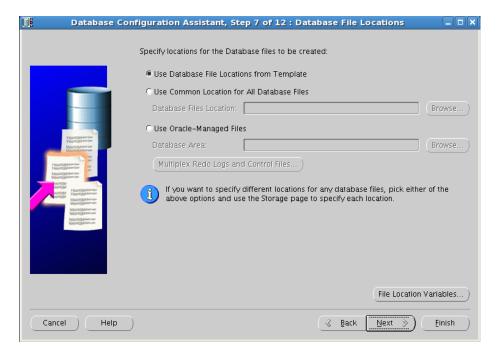

3.11 一般的服务器或者 PC 机都是用文件系统存储数据库,选择 file system

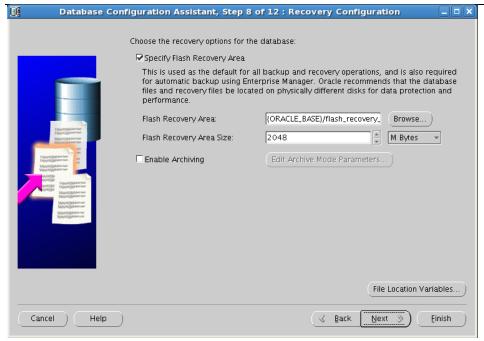

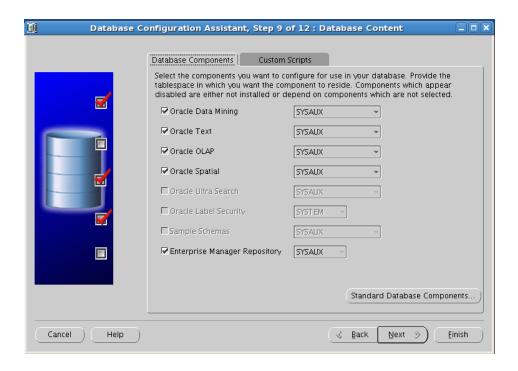

3.12 选"use database file location from template

3.13 选择默认的备份和恢复选项

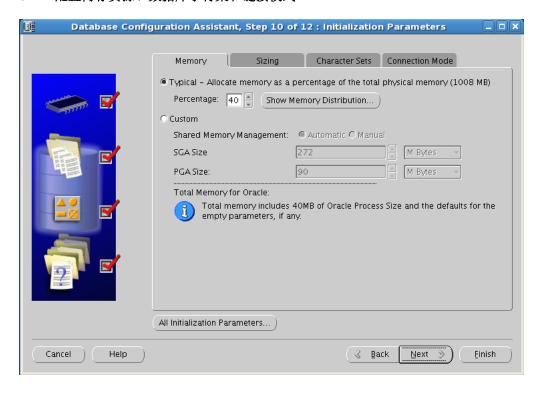

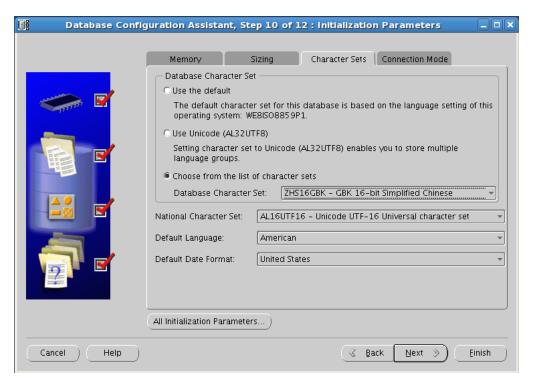

3.14 配置内存资源、数据库字符集和链接模式

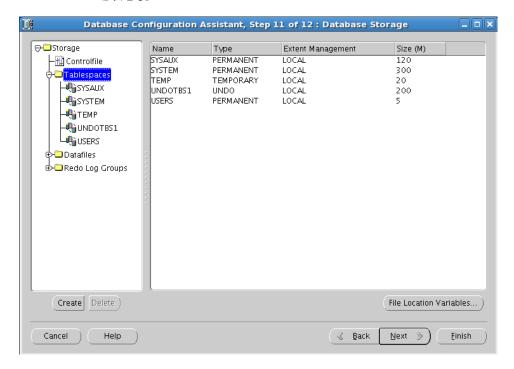

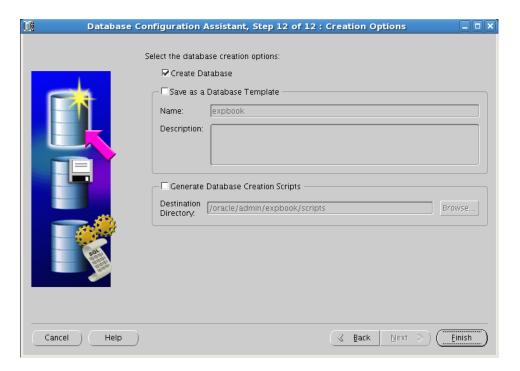

3.15 选择字符集,非常好重要

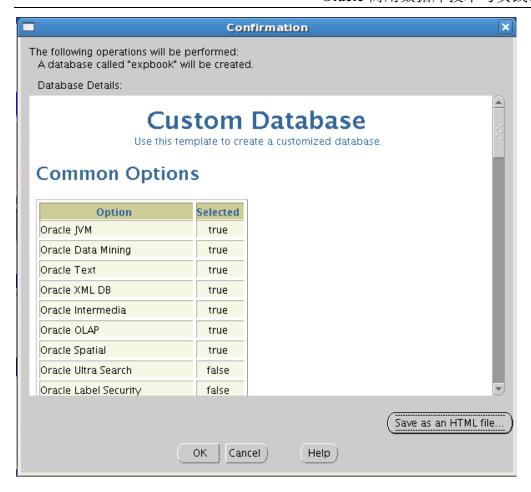

3.16 DBCA 选项总揽

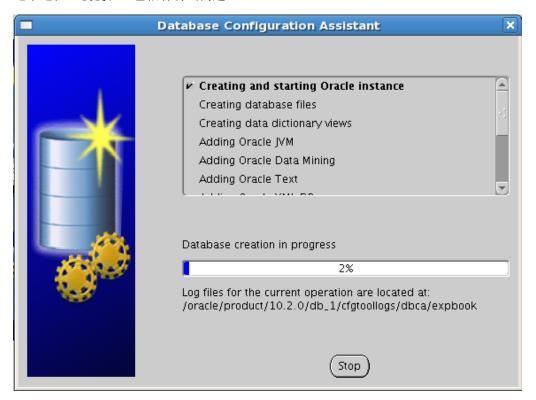

3.17 DBCA 开始配置创建数据库

这个过程比较漫长, 也很容易出问题

3.18 DBCA 完成后,可以管理几个主要账户密码

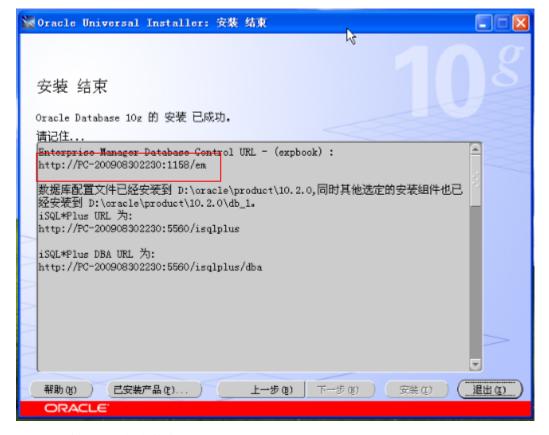

3.19 安装程序开始配置 iSQL*PLUS

3.20 完成后的画面中会有管理端入口地址和 sqlplus 入口地址。

3.21 至此 oracle 的安装完成

4. Oracle 开机自动启动和关闭方法

4.1 修改启动选项

vi /etc/oratab

expbook:/oracle/product/10.2.0/db_1:Y

说明:

- 格式为: SID:ORACLE HOME:Y
- 把 AUTO 域设置为 Y(大写),只有这样,oracle 自带的 dbstart 和 dbshut 才能够发挥作用

4.2 处理服务脚本:

将脚本命名为 oracle, 保存在/etc/rc. d/init. d下 改变文件属性: chmod 755 oracle chown root.root oracle

4.3 建立服务连接:

系统启动时启动数据库, 我们需要以下连结:

```
ln -s ../init.d/oracle /etc/rc.d/rc2.d/S99oracle
ln -s ../init.d/oracle /etc/rc.d/rc3.d/S99oracle
ln -s ../init.d/oracle /etc/rc.d/rc5.d/S99oracle
```

要在重新启动时停止数据库, 我们需要以下连结:

```
ln -s ../init.d/oracle /etc/rc.d/rc0.d/K01oracle ln -s ../init.d/oracle /etc/rc.d/rc6.d/K01oracle # 停止、重新启动
```

4.4 脚本内容

```
#!/bin/bash
# Oracle DataBase
# chkconfig: 35 80 13
# description: Oracle
  # AutoStart Oracle and listener
  # AutoStop Oracle and listener
  # Created by bluefox 2003-11-26
  case "$1" in
  start)
  echo "Starting Oracle Databases ... "
  echo "-----" >> /var/log/oracle
  date +" %T %a %D : Starting Oracle Databasee as part of system up." >> /var/log/oracle
  echo "-----" >> /var/log/oracle
  su - oracle -c "dbstart" >> /var/log/oracle
  echo "Done."
  echo "Starting Oracle Listeners ... "
  echo "-----" >> /var/log/oracle
  date +" %T %a %D : Starting Oracle Listeners as part of system up." >> /var/log/oracle
  echo "-----" >> /var/log/oracle
  su - oracle -c "Isnrctl start" >> /var/log/oracle
```

```
echo "Done."
echo ""
echo "-----" >> /var/log/oracle
date +" %T %a %D : Finished." >> /var/log/oracle
echo "-----" >> /var/log/oracle
touch /var/lock/subsys/oracle
stop)
echo "Stoping Oracle Listeners ... "
echo "-----" >> /var/log/oracle
date +" %T %a %D : Stoping Oracle Listener as part of system down." >> /var/log/oracle
echo "-----" >> /var/log/oracle
su - oracle -c "lsnrctl stop" >> /var/log/oracle
echo "Done."
rm -f /var/lock/subsys/oracle
echo "Stoping Oracle Databases ... "
echo "-----" >> /var/log/oracle
date +" %T %a %D : Stoping Oracle Databases as part of system down." >> /var/log/oracle
echo "-----" >> /var/log/oracle
su - oracle -c "dbshut" >>/var/log/oracle
echo "Done."
echo ""
echo "-----" >> /var/log/oracle
date +" %T %a %D : Finished." >> /var/log/oracle
echo "-----" >> /var/log/oracle
restart)
$0 stop
$0 start
*)
echo "Usage: oracle {start|stop|restart}"
exit 1
esac
```
